Forcepoint

# Visualize the economic impact of your security posture with the Insights feature in Forcepoint ONE

Forcepoint Insights provides real-time return on investment for security across multiple channels using threat analysis, data security functionality and more.

## Assess your security posture with the Forcepoint Security Index

The Forcepoint security index lets you see the

strength of your cloud and web security across five key areas: SWG protection, CASB API protection, CASB inline protection, user logins and agents seen. The Forcepoint security index gives you a quick way to evaluate your current state and measure progress over time.

# See the value of sensitive data protected by channel

Putting data security policies in place provides the necessary telemetry for Zero Trust, but Forcepoint goes the extra mile to make it simple to see the spread of sensitive data by channel and the value that is being protected.

# Create custom visualizations and dashboards

Insights enables the creation of highly customizable dashboards and widgets using any measures or dimensions captured by the Forcepoint ONE security services. The intuitive console makes it easy to correlate data across any metrics you choose. Save the correlated data as a widget for repeated inspection.

#### Forcepoint ONE Unified Cloud Security Platform

Forcepoint ONE is the industry's most flexible single-vendor SASE solution, making Zero Trust easier to implement and adopt. We go beyond access control, seamlessly adding industry-leading DLP and Secure SD-WAN, along with advanced threat protection throughout our ZTNA, CASB and SWG services. Enhanced RBI and CDR capabilities enable Zero-Trust Web Access for the most secure browsing experience; safe access to ANY website and downloaded documents. **Forcepoint is Security. Simplified.**
